

Intraoperative Hypotension in Elder Patients (iHypE)

Observational Study of Intraoperative Hypotension in Patients aged over 65 in UK Hospitals

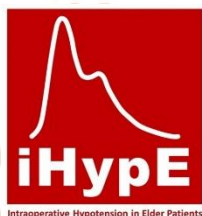

Data will be analysed from anaesthetics in your hospital on day date and day date 2016

iHypE will analyse data collected as part of your routine clinical care for all patients ≥ 65 years old having surgery under general or regional anaesthesia in this hospital on xx and xx xxxx 2016.

This study aims to describe how blood pressure changes during your operation and help define a lower limit.

The information being collected is anonymous and will not affect your care.

If you would like more information, or if you do not wish to take part please contact the person named below. **Further information is available in our information sheet**
